Less time on admin. More time for care.

Running a modern Home Care service is complex. You are juggling rosters, compliance, budgets, and the daily realities of supporting clients. Care System's HomeCare solution takes away that stress by automating the essentials so your team can focus on what matters most, delivering quality care.

Smarter Scheduling and Workforce Management

Fill every shift and keep clients supported without the rostering headaches.

A simple dashboard gives you a clear view of staff availability, client bookings, and travel routes. With drag and drop rostering allowing changes to be made in seconds, workers receive updates instantly on their mobile devices.

The result: Services run smoothly, clients feel secure, and coordinators gain back valuable hours each week.

Empowered Workers, equals Better Client Care

When workers feel supported, they deliver better outcomes. The HomeCare Mobile app puts everything they need in the palm of their hand.

Workers can see their forward schedule up to 14 days ahead. They can view service instructions and care plans, record visit status in real time, and review client progress notes.

The result: Workers walk into each client's home prepared and confident, and clients feel reassured knowing their care team is fully informed.

Managing New Enquiries with Ease

Bring new clients on board without the paper chase.

The enquiries dashboard allows you to track new enquiries and their source. Budgets are simple to create and manage with tools that track income and expenses. Digital care plans, assessments and agreements can be created online and downloaded to PDF. Contracts and documents are stored with review dates and statistical reporting, so nothing is ever missed.

Finance, Claiming and Reporting Done for you

HomeCare seamlessly integrates to Care Systems' billing, payroll and general ledger modules plus all relevant government portals for Support At Home, NDIS claiming and CHSP reporting.

The benefit of this is that the moment a worker confirms a visit as complete in the field via the HomeCare Mobile app, the resulting Client Billing, Claiming, Payroll and Reporting data is available immediately with no further action required. No timesheets to process, KMS to calculate or Progress note to transcribe.

Have a preferred system for finance and reporting? HomeCare is also designed with this in mind and has open API technology that allows businesses to connect to any chosen external system.
